

INTERNATIONAL A-LEVEL PHYSICS PH05

Unit 5 Physics in practice

Mark scheme

June 2023

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from oxfordagaexams.org.uk

Copyright information

OxfordAQA retains the copyright on all its publications. However, registered schools/colleges for OxfordAQA are permitted to copy material from this booklet for their own internal use, with the following important exception: OxfordAQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor for the level shows the average performance for the level. There are marks in each level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

Step 1 Determine a level

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level. The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly level 3 with a small amount of level 4 material it would be placed in level 3 but be awarded a mark near the top of the level because of the level 4 content.

Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the Indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

Question	Answers	Additional comments/Guidelines	Mark	АО
01.1	Idea that the resolution of the micrometer is better than the calipers ✓	Accept reference to precision or resolution	2	1 AO2 1 AO3
	using a micrometer leads to a smaller (percentage) uncertainty in the measurement (of diameter) ✓	For MP2 accept reference to difficulty of ensuring vernier jaws are across the diameter		

Question	Answers	Additional comments/Guidelines	Mark	AO
01.2	An attempt to explain why 0.01 is chosen ✓ Correct manipulation with powers of ten dealt with convincingly ✓	E.g. for MP1: Absolute uncertainty in 3 sig fig value is \pm 0.01 Expect to see $\frac{0.01}{9.81} \times$ 100%	2	1 AO1 1 AO2

Question	Answers	Additional comments/Guidelines	Mark	АО
01.3	Correct substitution or manipulation \checkmark 3.89 \checkmark N s m ⁻² OR kg s ⁻¹ m ⁻¹ \checkmark	Allow MP1 even with power of ten errors Answer to at least 3sf. Calculator value is 3.8903452 Allow variations consistent with unit eg 3900 with mN s m $^{-2}$	3	2 AO1 1 AO2

Question	Answers	Additional comments/Guidelines	Mark	AO
01.4	Adds absolute uncertainties of density and finds percentage uncertainty for the difference in densities \checkmark Doubles their percentage uncertainty in $r \checkmark$ Adds their percentage uncertainties and 4% to give 5% or 5.4% \checkmark	Expect to see 0.76 % Expect to see 2 × 0.28 %	3	1 AO1 2 AO2
Total			10	

Question	Answers	Additional comments/Guidelines	Mark	АО
02.1	Takes logs of $V = V_0 e^{\frac{-t}{RC}}$ successfully \checkmark Compares the correct log equation with $y = mx + c$ to show that $m = -\frac{1}{RC}$ \checkmark		2	2 AO3

Question	Answers	Additional comments/Guidelines	Mark	AO
02.2	Calculates one gradient correctly or calculates one value of 1/gradient correctly ✓ Attempts to find both gradients and takes their average ✓ 34 s ✓	$\label{eq:maxgradient} \begin{split} &\text{Max gradient} = 0.030 \ (s^{\text{-}1}) \\ &\text{Min gradient} = 0.029 \ (s^{\text{-}1}) \\ &\text{Corresponding values of 1/gradient are 33 s} \\ &\text{and 35 s} \\ &\text{Candidates who draw a single line in between those plotted can access MP1 and MP3 but not MP2} \end{split}$	3	3 AO3

Question	Answers	Additional comments/Guidelines	Mark	AO
02.3	(Candidate compares max and min gradient from 02.2 with mean value to give) an uncertainty in the range $0.7~\rm s$ to $1.0~\rm s$ \checkmark		1	1 AO3

Question	Answers	Additional comments/Guidelines	Mark	АО
02.4	Any random error ✓	Accept reasonable alternative eg parallax (but parallax cannot be rewarded in both 02.4 and 02.5)	1	1 AO4

Question	Answers	Additional comments/Guidelines	Mark	АО
02.5	zero error on voltmeter or contact resistance or resistance of voltmeter ✓	Accept reasonable alternative eg parallax (but parallax cannot be rewarded in both 02.4 and 02.5) Accept 'voltmeter incorrectly calibrated' but not 'voltmeter not calibrated'.	1	1 AO4

Question	Answers	Additional comments/Guidelines	Mark	AO
02.6	 ANY 2 ✓✓ Camera/'phone may be arranged to prevent parallax error Idea that freeze frame capacity allows the observer to take simultaneous readings ✓ Greater number of readings possible (within the time range) (should reduce range of possible gradients) 	Allow idea that analogue meters respond quickly compared with fixed sampling time for electronic meters	2	2 AO4
Total			10	

Question	Answers	Additional comments/Guidelines	Mark	AO
03.1	Idea that friction is an external force (and momentum is only conserved in the absence of external forces)		1	AO4

Question		Answers	Additional comments/Guidance	Mark	AO
Question 03.2	Mark 6	nark scheme gives some guidance as to what statements expected to be seen in a 1- or 2-mark (L1), 3- or 4-mark (L2) is or 6-mark (L3) answer. Guidance provided in section of the 'Mark Scheme Instructions' document should be to assist in marking this question. Criteria All three areas (as outlined alongside) covered with at least two aspects covered in some detail. 6 marks can be awarded even if there is an error and/or parts of one aspect missing. A fair attempt to analyse all three areas, with two areas discussed successfully and one area partially. Two areas successfully discussed, or one discussed and two others covered partially. Whilst there will be gaps, there should only be an occasional error. One area discussed successfully and one discussed partially, or all three covered partially. There are likely to be several errors and omissions in the discussion. Only one area discussed successfully, or makes a partial attempt at two areas.	Area 1: Description of apparatus and how to minimise friction Angled runway/air track with explanation of how friction compensated Trolley/equivalent with wheels or glider Light gates with dataloggers/timers/computer with sensors OR other means of determining speed/time Area 2: Account of the method Finds mass of both gliders using mass balance Measure length of card/glider or distance between pairs of light gates or uses doppler device Record time card/glider interrupts 1st light gate OR record initial velocity of glider Record time card/glider interrupts 2nd light gate OR record final velocity of gliders Area 3: How measurements used. Determine or use velocity of single and combined gliders Calculate initial momentum of single glider	Mark 6	4 × AO2 2 × AO3
	1	One of the three areas covered partially. There are likely to be many errors or omissions.	 Calculate final momentum of combined gliders Compare both momenta and draw a conclusion OR equate final and initial momenta OR an attempt at a graphical method which may not be complete 		
	0	No relevant analysis.			

Question	Answers	Additional comments/Guidelines	Mark	АО
03.3	Momentum before collision = $2.60~kg~m~s^{-1}$ and momentum after collision = $2.56~kg~m~s^{-1}$ \checkmark Uses uncertainties appropriately and states that the principle is supported \checkmark	E.g. for appropriate use of uncertainties in MP2 Shows that there is overlap in the ranges (2.58 to 2.62 cf 2.53 to 2.59) OR Determines percentage uncertainty in speed measurements and compares with percentage difference in momenta. Expect to see $0.7 + 1.2 > 100 \times (2.6-2.56) \div 2.56$	2	1 AO3 1 AO4
Total			9	

Question	Answers	Additiona	l commen	ts/Guidelines	Mark	АО
04.1	All values correct to 2 sf but accept 1 sf for the first two rows ✓ Condone 3sf	1/m 0.200	y / mm 1	$\sqrt[3]{y} / \text{mm}^{\frac{1}{3}}$ 1.0	1	1 AO3
		0.300	6	1.8		
		0.400	14	2.4		
		0.500	30	3.1		
		0.600	50	3.7		
			I			

Question	Answers	Additional comments/Guidelines	Mark	АО
04.2	Acceptable scales chosen ✓ Axes properly labelled ✓ First point plotted correctly on a sensible scale ✓ Fifth point plotted correctly on a sensible scale ✓	At least half of space used. No awkward scales Candidates who draw axes the wrong way round lose MP2	5	5 AO3
	Good best-fit straight line with a positive intercept on the l axis \checkmark	For a graph of y against $\sqrt[3]{y}$ only MP1 accessible		

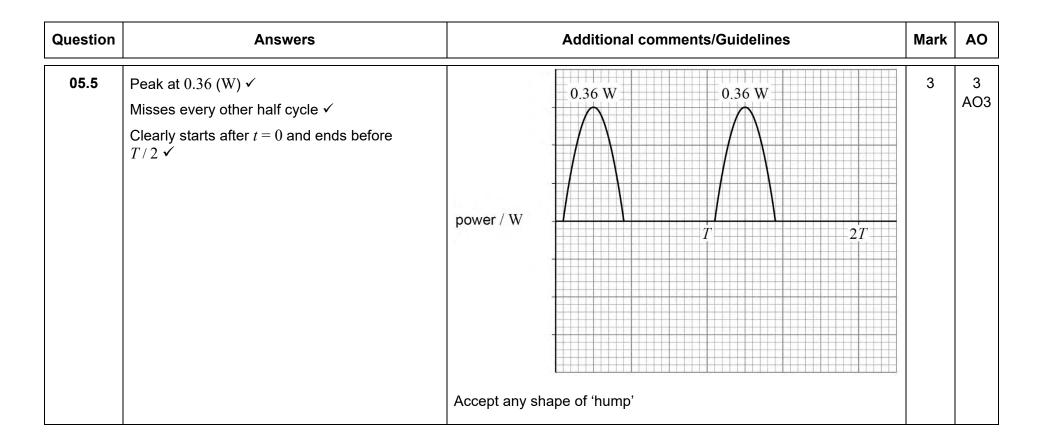

Question	Answers	Additional comments/Guidelines	Mark	АО
04.3	Does not go through the origin so l not proportional to $\sqrt[3]{y}$ (therefore y is not proportional to l^3) \checkmark		1	1 AO3
Total			7	

Question	Answers	Additional comments/Guidelines	Mark	АО
05.1	Substitutes their T into $f = \frac{1}{T}$ OR extracts period correctly \checkmark 11.4 (Hz) to 3sf \checkmark	Expect to see $0.088 \mathrm{\ s}$ Accept between $0.087 \mathrm{\ s}$ and $0.089 \mathrm{\ s}$ to give $11.2 \mathrm{\ (Hz)}$ to $11.5 \mathrm{\ (Hz)}$	2	2 AO3

Question	Answers	Additional comments/Guidelines	Mark	AO
05.2	Evidence of $I = \frac{P}{4\pi r^2} \checkmark$	${\it P}$ should appear in an equation in some form.	2	1 AO2
	23.6 W ✓			1 AO3

Question	Answers	Additional comments/Guidelines	Mark	AO
05.3	Uses electrical power = $\frac{23(.6)}{0.057}$ OR $R = \frac{220^2}{their P} \checkmark$ 117 (Ω) \checkmark	Do not alllow incorrect method e.g. using 220×0.057 Use of $P=24$ W gives an answer of 115 (Ω) Accept 110 (Ω) or 120 (Ω) from correct working.	2	1 AO1 1 AO2

Question	Answers	Additional comments/Guidelines	Mark	AO
05.4	Idea that (for the first 22 ms) the temperature of the filament is increasing (when there is a current) \checkmark and takes more time (50 ms) to cool after current stops \checkmark		2	1 AO1 1 AO2

Question	Answers	Additional comments/Guidelines	Mark	AO
05.6	Idea that the filament lamp takes time to heat up/cool down/reach maximum intensity (and therefore flashes would overlap). ✓	Accept reverse arguments Accept idea that filament lamp may have higher failure rate Accept idea that the filament lamp will not reach zero intensity	1	1 AO4

Question	Answers	Additional comments/Guidelines	Mark	AO
05.7	Takes data correctly from Figure 12 \checkmark Uses their value of s in $s = \frac{1}{2}gt^2 \checkmark$ Uses the third, fourth or fifth image and divides by 3, 4 or 5 appropriately to give the periodic time of the flash \checkmark	0.02 m, 0.08 m, 0.17 m, 0.31 m and 0.49 m Expect to see $t = 0.04 s, 0.13 s, 0.19 s, 0.25 s, 0.32 s$	4	1 AO2 3 AO3
	uses it to obtain an answer that rounds to 16 (Hz) ✓	MP4 is dependant on MP3		
Total			16	

Question	Answers	Additional comments/Guidelines	Mark	АО
06.1	Use of $Q = ml$ AND use of $Q = mc\Delta\theta \checkmark$	Allow POT errors in MP1, MP2 and MP3	4	1 AO1
	Complete substitution OR at least two correct components \checkmark Use of $E=Pt$	$5.4 \times 10^{7} \times t = (9.3 \times 10^{4} \times 1440 \times 510) + (9.3 \times 10^{4} \times 980 \times 340) + (9.3 \times 10^{4} \times 2.4 \times 10^{5}) = 6.83 \times 10^{10} + 3.1 \times 10^{10} + 2.23 \times 10^{10}$ $t \text{ (seconds)} = 2250 \text{ s}$		3 AO2
	38 (minutes) ✓	Accept answer between 37 and 38 (minutes)		

Question	Answers	Additional comments/Guidelines	Mark	АО
06.2	Use of $P = VI \checkmark$	Expect to see $I_p = 818.18$ (A)	3	1 AO1
	Use of $\frac{I_{\rm s}}{I_{\rm p}} = \frac{N_{\rm p}}{N_{\rm s}}$ OR $\frac{V_{\rm p}}{V_{\rm s}} = \frac{N_{\rm p}}{N_{\rm s}}$ \checkmark	Expect to see $I_s = 5.52 \times 10^4$ (A) OR $V_s = 978$ (V) In MP2 accept use of peak current or peak voltage		2 AO2
	$1.8(4) \times 10^4 \mathrm{A} \checkmark$			

Question	Answers	Additional comments/Guidelines	Mark	АО
06.3	The idea that (more) charge carriers are being created ✓	Allow "ions" for "charge carriers"	2	1 AO1
				1 AO2
	Charge carriers collide with atoms and cause ionisation			
	OR			
	Charge carriers are accelerated (by the electric field) ✓			

Question	Answers	Additional comments/Guidelines	Mark	АО
06.4	 MAX 2 from ✓ Linear velocity to the right of large rollers is 1.48 m s⁻¹ use of ^{22.0}/_{17.8} × 4.2 or 5.19 seen uses v = rω 23.7 or 24 rad s⁻¹ ✓ 		3	1 AO1 2 AO2
Total			12	

Question	Answers	Additional comments/Guidelines	Mark	AO
07.1	Uses $\varepsilon = \frac{\Delta L}{L}$ or $\frac{0.13}{0.647}$ seen and $\sigma = E\varepsilon$	Alternative MP1 Use of $E = \frac{FL}{eA}$	5	1 AO1
	Additional tension 1.74 (N)			3 AO2
	Additional tension = 1.74 (N) ✓			1 AO3
	Total tension = their additional tension + 56.4 ✓	Expect to see 58.1 (N)		
	Use of $f = \frac{1}{2l} \sqrt{\frac{TheirT}{\mu}} \checkmark$	Condone original length for <i>l</i>		
	(increase of) 5.0 to 5.2 Hz \checkmark	2 or more sf		

Question	Answers	Additional comments/Guidelines	Mark	AO
07.2	Correctly identifies decrease in length with increase in frequency OR		2	1 AO2 1 AO3
	Correctly identifies decrease in tension with decrease in frequency \checkmark Correctly identifies both ,with conclusion based on $f = \frac{1}{2l} \sqrt{\frac{T}{\mu}} \checkmark$	Expect conclusion to include idea that the frequency will decrease because a small decrease in length is associated with a large decrease in tension		

Question	Answers	Additional comments/Guidelines	Mark	АО
07.3	I FILLY LIFOR DEFINATION MANDELL LINKING WITH THE COIL CHANGES I	Condone idea that the magnetic field lines are cutting the coil.	1	1 AO2
	,	Treat references to the string as neutral.		

Question	Answers	Additional comments/Guidelines	Mark	AO
07.4	(The string is moving away) and the effect of the induced emf will tend to oppose that motion (in accordance with Lenz's law). ✓	Do not accept induced emf opposes the motion	2	2 AO2
	Magnetic field will be strengthened ✓	Condone 'greater/bigger magnetic field'		

Question	Answers	Additional comments/Guidelines	Mark	АО
07.5	Use of $R = \frac{\rho l}{A}$ and $V = IR$ \checkmark	Expect to see $R=2.09 \times 10^3 \Omega$ and $V=0.038 \mathrm{V}$	3	2 AO2 1 AO3
	Use of $E = N\frac{\Delta\phi}{\Delta t}$ or $E = NA\frac{\Delta B}{\Delta t}$ 5.2 × 10 ⁻⁶ (Wb s ⁻¹) \checkmark	Condone lack of N		

Question	Answers	Additional comments/Guidelines	Mark	AO
07.6	Sound wave produces a (periodic) driving force (on the string). ✓ The driving (force's) frequency is equal to the (string's) vibrational/natural frequency ✓ (The amplitude of the vibration increases as) the string is in resonance/resonating ✓	Reject MP3 if there is a suggestion that the speaker or sound wave is in resonance. Condone 'resonance occurs'.	3	1 AO1 2 AO2
Total			16
